- **Changing year in the header**
  - Write a function that changes the color ever second (Change color every secound)
    - I have to select the h1 element to select the year
    - I have to write algorithm to call the change color function and make sure it runs every second.

  - Write a second function that create color at random (ChangeColorAtRandom function)
- **Changing Date time**
  - Write a second function that create color at random (ChangeColorAtRandom function)
  - (Change color every secound)
- **Changing Date time**
  - For Done mark the color green, for ongoing mark with yellow, and for coming mark red
    - Select all the html element
    - Write a condition that checks if the element content has "done" then you can style with the respective color
